The research is of great interest due to the overall situation in the history of the ancient American civilizations, to the growing interest in religion, mythology, and the worldview of pre-Columbian inhabitants of America.

Before the arrival of Europeans, the people on the unknown territory developed in their own special way. This fact is of particular interest as they didn’t feel the influence of other cultures and civilizations. The people did not adopt the experience of other nations. Their life, culture, writing, architecture, painting were unique and had no analogues. This isolation allows us to recreate and analyzes the way of evolution and the development of thinking.

Also, here we have a huge, slightly unexplored cultural layer. The process of «discovery of America» has begun recently. It continues up to now. The Maya writing was deciphered in the mid-twentieth century by the Soviet scientist-linguist Knorozov. In the selva of the Yucatan, the lost Maya cities were discovered almost every year.

Key words: Mesoamerica; Maya; Ancient civilization; Pre-Columbian.
buildings then the «palaces» were likely to serve dwellings for the nobility and priests.

Temples and palaces were decorated with ornaments and bas-reliefs of mythological themes. Stelae (stone slabs) with plotted images of people should be noted as well as the hieroglyphic inscriptions and dates. The American scientist of Russian origin – Tatiana Proskuryakova made the breakthrough in the study of the history of the ancient Maya. [5, p. 240] M. Coe referred that Proskuryakova had analyzed inscriptions of 35 monuments of the «city» Piedras Negras marked with Mayan calendar dates. She found out that there was a definite regularity in disposition of such monuments located in front of architectural structures. All monuments formed seven stand-alone groups. Calendar stelae dates matched average life expectancy. On this basis they assumed that each group represented Chronicle of a certain reign. Nowadays there are a number of facts supporting the theory. On the first monument of each group a figure of a young man sitting in a niche above the platform or plinth was depicted. Two important calendar dates were carved usually on a stela. One of them with added hieroglyph in the form of an animal’s head with a bandaged cheek pointed to the time of arrival of this character to power; the other accompanied by hieroglyph of a frog with raised legs pointed to the time of birth of that man. Older monuments of the same group probably were linked with events such as marriage and the birth of heirs. Tatiana Proskuryakova was able to identify the signs associated with the names and titles, especially with the names and titles of the female characters which stood out in the classical era of the Maya sculpture. References to military victories especially if the governor had managed to seize an important enemy were on stelae [2, pp. 229–236]. Later after deciphering Maya writing by Knorozov Proskuryakova’s theory received irrefutable proof.

All areas of the Maya art are interlaced. It is impossible to understand the meaning of the sacred ball game not knowing the rituals for the sake of competitions were held. Ritual can’t be comprehended without understanding their world view, known as the subject of study artworks, including literature. In order to understand the meaning of their art one has to learn the mythology and religion. The level of science is estimated after reading texts, but to read texts means to be acquainted with the script.

The study of Mesoamerica is a very lively and interesting theme. Almost every year Americans of different countries make discoveries to revise our understanding of culture and sometimes facts as far as this region is concerned. Here a few examples are. According to archaeologists’ points of view (Willie G. and Bullard W., 50-th of the XX century) settlement of the classical period were «ceremonial centers» where only priests lived. The lower levels of the settlement hierarchy were represented by smaller «ceremonial centers» and villages. The bulk of the population lived there. In Gulyaev’s book published in 1979 [3], the author examines the structure and functions of the city in the early class society. Here he cites Willie’s study where the archaeologist indicates that there are three types of settlements: «The first one (type “A”) was a ritual center surrounded by residential buildings. They were arranged so closely that their inhabitants could not engage in agriculture on the remaining vacant lots. The second type (“B”) was distinguished by the fact that there was a ritual center in front of us. It had no dwelling. The houses were widely scattered throughout the neighborhood. The third type (“C”) was similar to the second one (“B”) so as there were no ordinary people in the ritual center. And farmers supporting the center were concentrated in villages and towns having their own minor ceremonial centers of small scale» [3, p. 164]. Pay attention: it took Willie less than 30 years to add new details to his investigations which were of great importance.

In journal «Science» (15th of September 2006) a group of authors published an article «Oldest Written in the New World». It was about the archaeological discovery known as «Cascajal block». Symbols of this block looked like the Maya hieroglyphic texts. Block dated back from 900 BC. Scientists believe that they have the sample of Epi-Olmec script which apparently is the ancestor of the Maya writing. If the authenticity of the block is confirmed, the history textbooks will have to make adjustments [5, pp. 1610–1614].

One more example: on the 11th of July 2013 workers found the ruins of an ancient settlement
in the municipality Jaltipan (eastern state of Veracruz). A twelve meter pyramid was excavated among other things by archeologists. The age of settlement is about 2000 years. It was the first stone pyramid detected in this region [1].

Thus, the information obtained from the books of 60–70 years of XX century must be specified. And the data of the books of earlier editions should be checked.
